MULTI BULL
THE RIGHT TOOL FOR EVERY TASK

W3H

TRANSPORT OF LOOSE MATERIALS AND GOODS ON PALLETS

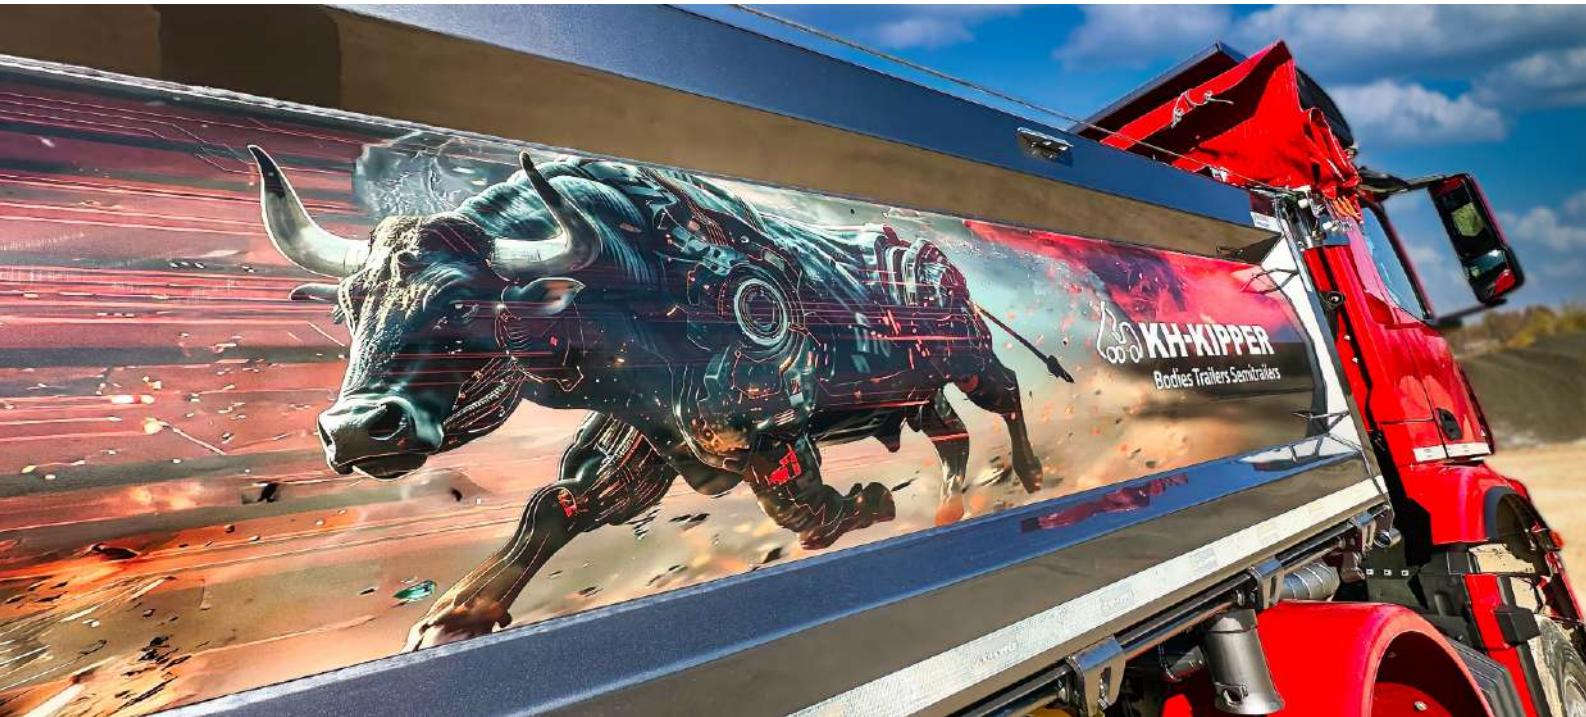

ONE TRUCK, DIFFERENT NEEDS

Efficiency, precision and versatility in transport are key to everyday work. All these features characterize a three-way hydroboard body. It is a universal solution for various types of earthworks, construction and demolition. It can be used to transport bulk materials, palletized materials and small-sized construction machinery.

Equipping the tipper with a hydraulic crane allows for independent loading and unloading, where there is no access to a forklift.

Thanks to the trailer hydraulic system, it is possible to increase the total load capacity of the trailer combination. An optional rear wall in the form of a French door opening sideways allows the transport of long elements, e.g. sewer pipes.

UNIVERSAL SOLUTION

The three-way W3H body with underfloor cylinder is equipped with a hydraulic left side wall. It lowers smoothly downwards from vertical position to 180° depending on the configuration of the chassis. This enables a forklift to drive up to the body and efficiently load palletized materials.

After lifting the body and opening the side wall to 90°, it is possible to precisely unload the material at a certain distance from the vehicle.

The hydraulic side wall is controlled by a joystick mounted in the cabin at the driver's seat. Operation is possible both from the ground and from the seat without having to get out of the cab.
