Compact size, maximum performance in the three-way version of the Mini Bull

The Mini Bull is a modern heavy-duty, multifunctional tipper with a W3FL-type three-way tipper body, designed for chassis with a Gross Vehicle Weight (GVW) of 7.49 tonnes. The new design combines a lightweight construction, exceptional load capacity and unrivalled operational flexibility.

The W3FL body is a multi-purpose work tool. It is suited to diverse fleets of machinery, meeting the specific needs of companies offering a wide range of construction-related services.

A key distinguishing feature of the Mini Bull model is its ability to load and transport a compact excavator. The design of the load bed allows the machine to be loaded safely, enabling it to be transported efficiently exactly where it is needed at any given moment.

8 heavy-duty load-securing points with a 2-tonne capacity ensure safe load securing. The HARDOX® steel floor provides exceptional resistance to abrasion and impact, ensuring long service life.

Dual-function drop sides, with lower hinges on the side panels and tailgate, allow the body to be used as a flatbed for effortless pallet unloading,

while the upper hinges on the tailgate and post-free rear design ensure quick unloading of bulk materials. Front-mounted restraining chains safely limit the opening angle of the side panels to 90°. Special steps and handles provide easy and safe access to the body. A modern hydraulic cylinder ensures smooth and safe tipping.
